Preface

Hi there, this is my great book.

Why read this book

It is very important...

Structure of the book

Chapters 1 introduces a new topic, and ...

Software information and conventions

I used the **knitr** package (Xie, 2015) and the **bookdown** package (Xie, 2020) to compile my book. My R session information is shown below:

```
xfun::session_info()

## R version 4.0.2 (2020-06-22)

## Platform: x86_64-w64-mingw32/x64 (64-bit)

## Running under: Windows 10 x64 (build 19043)

##

## Locale:

## LC_COLLATE=English_United States.1252

## LC_CTYPE=English_United States.1252

## LC_MONETARY=English_United States.1252

## LC_NUMERIC=C
```

LC_TIME=English_United States.1252

x Preface

```
##
## Package version:

##
    yaml_2.2.1
```

Package names are in bold text (e.g., **rmarkdown**), and inline code and filenames are formatted in a typewriter font (e.g., knitr::knit('foo.Rmd')). Function names are followed by parentheses (e.g., bookdown::render_book()).

Acknowledgments

A lot of people helped me when I was writing the book.

Frida Gomam on the Mars

About the Author

Frida Gomam is a famous lady. Police will always let her go.

1

Introduction

Now unplug your Internet cable, and start doing some serious work. We have a nice figure in Figure 1.1, and also a table in Table 1.1.

```
par(mar = c(4, 4, 1, .1))
plot(cars, pch = 19)
```

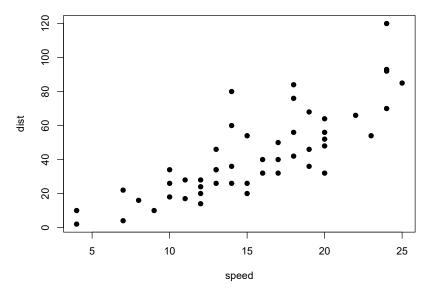

FIGURE 1.1 Hello World!

```
knitr::kable(
  head(iris), caption = 'The boring iris data.',
  booktabs = TRUE
)
```

More chapters to come in 02-foo.Rmd, 03-bar.Rmd, \dots

TABLE 1.1 The boring iris data.

Sepal.Length	Sepal.Width	Petal.Length	Petal.Width	Species
5.1	3.5	1.4	0.2	setosa
4.9	3.0	1.4	0.2	setosa
4.7	3.2	1.3	0.2	setosa
4.6	3.1	1.5	0.2	setosa
5.0	3.6	1.4	0.2	setosa
5.4	3.9	1.7	0.4	setosa

The following examples have been taken from the lmplot help page of the micromap R package. Figure 1.2 shows the first basic micromap plot.

```
library(micromap)
```

data("edPov")
# basic figure 1
lmplot(stat.data = edPov,
   map.data = statePolys,
   panel.types = c('labels', 'dot', 'dot', 'map'),
   panel.data = list('state','pov','ed', NA),
   ord.by = 'pov',
   grouping = 5, median.row = TRUE,
   plot.width = 2, plot.height = 6,
   map.link = c('StateAb','ID'))
```

This gets further refined now. Figure 1.3 shows the resulting second micromap plot.

```
# publication figure 1a
lmplot(stat.data = edPov, map.data = statePolys ,
    panel.types = c('labels', 'dot', 'dot', 'map'),
    panel.data = list('state', 'pov', 'ed', NA),
```

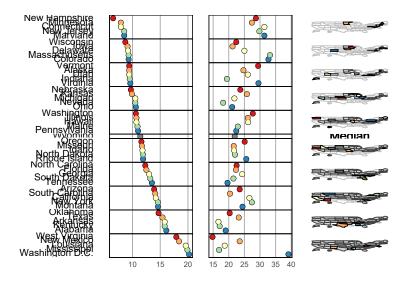

FIGURE 1.2 Here is a first micromap example.

```
ord.by = 'pov',
grouping = 5,
median.row = TRUE,
map.link = c('StateAb','ID'),
plot.height = 9,
colors = c('red','orange','green','blue','purple'),
map.color2 = 'lightgray',
panel.att = list(
   list(1, header = 'States', panel.width = .8, align = 'left',
      text.size = .9),
        list(2, header = 'Percent Living Below \n Poverty Level',
            graph.bgcolor = 'lightgray', point.size = 1.5,
            xaxis.ticks = list(10,15,20), xaxis.labels = list(10,15,20),
            xaxis.title = 'Percent'),
        list(3, header = 'Percent Adults With\n4+ Years of College',
            graph.bgcolor = 'lightgray', point.size = 1.5,
            xaxis.ticks = list(0,20,30,40), xaxis.labels = list(0,20,30,40),
            xaxis.title = 'Percent'),
        list(4, header = 'Light Gray Means\nHighlighted Above',
            inactive.border.color = gray(.7), inactive.border.size = 2,
            panel.width = .8)))
```

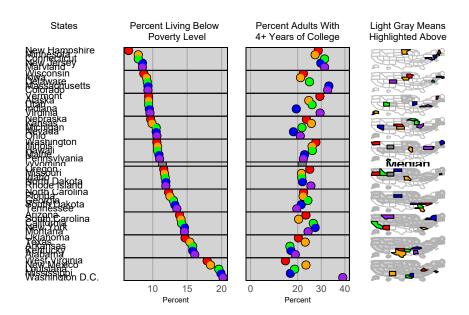

FIGURE 1.3 And here is a second micromap example.

Some more refinements, resulting in Figure 1.4.

```
edPov$points <- 0

# publication figure 1b

lmplot (stat.data = edPov, map.data = statePolys,
    panel.types = c('dot', 'labels', 'dot', 'dot', 'map'),
    panel.data = list('points', 'state', 'pov', 'ed', NA),
    map.link = c('StateAb','ID'),
    ord.by = 'pov',
    grouping = 5,
    median.row = TRUE,

plot.height = 9,

colors = c('red','orange','green','blue','purple'),
    map.color2 = 'lightgray',

panel.att = list(list(1, panel.width = .15, point.type = 20,</pre>
```

```
graph.border.color = 'white',
   xaxis.text.display = FALSE, xaxis.line.display = FALSE,
    graph.grid.major = FALSE),
list(2, header = 'States', panel.width = .8,
   align = 'left', text.size = .9),
list(3, header = 'Percent Living Below\nPoverty Level',
    graph.bgcolor = 'lightgray', point.size = 1.5,
   xaxis.ticks = list(10,15,20),
    xaxis.labels = list(10,15,20),
   xaxis.title = 'Percent'),
list(4, header = 'Percent Adults With\n4+ Years of College',
    graph.bgcolor = 'lightgray', point.size = 1.5,
    xaxis.ticks = list(20,30,40),
   xaxis.labels = list(20,30,40),
   xaxis.title = 'Percent'),
list(5, header = 'Light Gray Means\nHighlighted Above',
   inactive.border.color = gray(.7), inactive.border.size = 2,
   panel.width = .8)))
```

Final refinements. Here, the code is run separately. The figure is not shown. Rather, an external figure (jpeg or pdf) is created. Eventually, in Figure 1.5, this externally created figure is shown.

```
# publication figure 1c
lmplot(stat.data = edPov, map.data = statePolys,
    panel.types = c('map', 'dot', 'labels', 'dot', 'dot'),
    panel.data = list(NA, 'points', 'state', 'pov', 'ed'),
    map.link = c('StateAb','ID'),
    ord.by = 'pov',
    grouping = 5,
    median.row = TRUE,

plot.height = 9,

colors = c('red','orange','green','blue','purple'),
    map.color2 = 'lightgray',

print.file = 'JSmicromap4.jpeg',
```

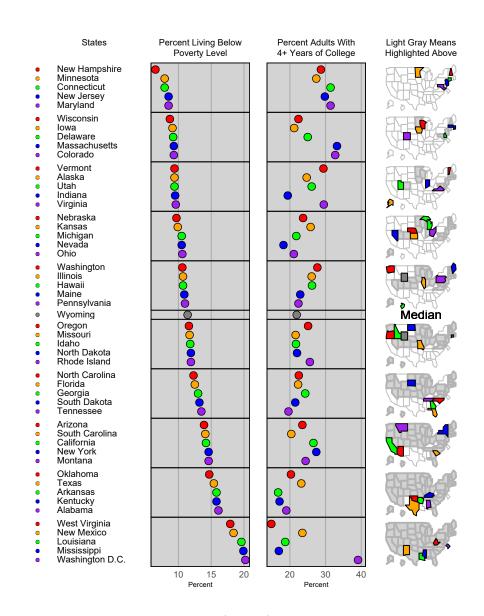

FIGURE 1.4 And now the third (revised) micromap example.

```
panel.att = list(list(2, panel.width = .15, point.type = 20,
            graph.border.color = 'white',
            xaxis.text.display = FALSE, xaxis.line.display = FALSE,
            graph.grid.major = FALSE),
        list(3, header = 'States', panel.width = .8,
            align = 'left', text.size = .9),
        list(4, header = 'Percent Living Below\nPoverty Level',
            graph.bgcolor = 'lightgray', point.size = 1.5,
            xaxis.ticks = list(10,15,20), xaxis.labels = list(10,15,20),
            xaxis.title = 'Percent'),
        list(5, header = 'Percent Adults With\n4+ Years of College',
            graph.bgcolor = 'lightgray', point.size = 1.5,
            xaxis.ticks = list(20,30,40),
            xaxis.labels = list(20,30,40),
            xaxis.title = 'Percent'),
        list(1, header = 'Light Gray Means\nHighlighted Above',
            inactive.border.color = gray(.7), inactive.border.size = 2,
            panel.width = .8)))
```

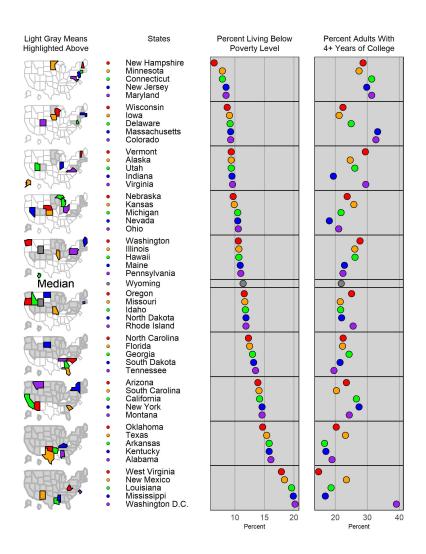

FIGURE 1.5 And now the fourth (and final) micromap example.

2

$The\ FOO\ Method$

We talk about the FOO method in this chapter.

Α

More to Say

Yeah! I have finished my book, but I have more to say about some topics. Let me explain them in this appendix.

To know more about **bookdown**, see https://bookdown.org.
